Summary

Backend Engineer with 2+ years building production-grade APIs, distributed microservices, and cloud-integrated data pipelines in Python, Django, and DRF. Delivered across FinTech and EdTech domains with strong foundations in DSA, system design, async processing, NoSQL/relational DB optimization, and security hardening. Experienced in Agile/Scrum environments with cross-functional collaboration.

Experience

Backend Software Engineer Dec 2025 – Present
Anand Rathi IT Pvt. Ltd. (FinTech) *Jodhpur, Rajasthan*

- Secured 100% of client-facing endpoints against XSS, clickjacking, and MIME-sniffing attacks by implementing browser-level HTTP security headers across all APIs (validated via pre/post security audit).
- Improved async API throughput by ∼40% (measured by CloudWatch timeout reduction) by architecting distributed microservices and event-driven data pipelines using AWS Lambda integrated with API Gateway.
- Restored stability across 5+ critical production modules by diagnosing deep-rooted bugs using OOP principles, reducing error tickets significantly post-deployment.
- Collaborated in Agile/Scrum sprints — sprint planning, iterative delivery, and peer code reviews.

Backend Software Engineer Jan 2025 – Dec 2025
Now A Wave Technologies Pvt. Ltd. (EdTech — Kreedology) *Jodhpur, Rajasthan*

- Reduced teacher reporting effort by ∼60% by building an Assessment Report Engine — a batch data pipeline that transforms raw game responses into structured, per-student diagnostic data at scale.
- Cut school onboarding time by ∼70% by building a bulk Excel ingestion system that auto-generates student, teacher, and section records across a multi-tiered distributed system.
- Improved platform reliability for 10,000+ active students by resolving critical bugs across EdTech modules, reducing production incidents with focus on scalability and performance.

Backend Software Engineer Intern Jul 2024 – Dec 2024
Befog Pvt. Ltd. *Remote*

- Delivered 15+ production-ready REST API endpoints with zero post-deployment defects by building APIs in Django/DRF with clean object-oriented architecture and robust error handling.
- Wrote automated functional and performance tests ensuring API reliability and consistent behavior across environments.

Technical Skills

Languages & Frameworks: Python, Django, Django REST Framework
Backend: REST APIs, JWT Auth, Async Processing, Microservices, Distributed Systems, Event-Driven Pipelines, OOP
Databases & Cache: PostgreSQL, MySQL, MongoDB (NoSQL), Redis · Query Optimization, Indexing, Schema Design
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, API Gateway, CloudFront), Docker, Linux, Nginx, Git
Core CS: Data Structures & Algorithms, System Design, DBMS
Practices: Agile, Scrum, Kanban, Automated Testing, Code Reviews

Competitive Programming

LeetCode (dkconnect10): **167+ problems solved** (Easy: 98 · Med: 67 · Hard: 2) · Contest Rating: **1,369** · Top **90.76%** globally · Max Streak: **107 days** · **100 Days Badge 2026** · 572 submissions (past year) · 149 active days
Striver A2Z Sheet: 104+ problems solved
Total DSA Practice: 271+ problems solved across platforms

Certifications

Python Programming Course — LearnVern / NSDC (Skill India Approved) · Apr 2024
MongoDB University · 2024

Education

Jai Narayan Vyas University Jodhpur, Rajasthan
B.Com in Finance & Economics *2021*

- Self-transitioned into Software Engineering through 2+ years of professional backend development experience.
